# **ProF2** Suite

ProF2 Suite was launched as a solution to meet all the requirements of the door and window frame industry. It consists of several integrated products that manage design, quotation, assembly, production control, CE marking, cutting list calculation and machining.

Door and window frame management, quotations, production lists, data transfer to machines, barcode production, Uw calculation and regulatory management.

Creation of grid price lists and definition of the rules of commercial configurator.

ProF2 version dedicated to showrooms and agents; it uses the commercial configurator.

Management of curtain walls, quotations and production lists.

Optimization of panel and glazing cutting.

Centralized management of the machining archive.

Detection of production times and monitoring of production progress.

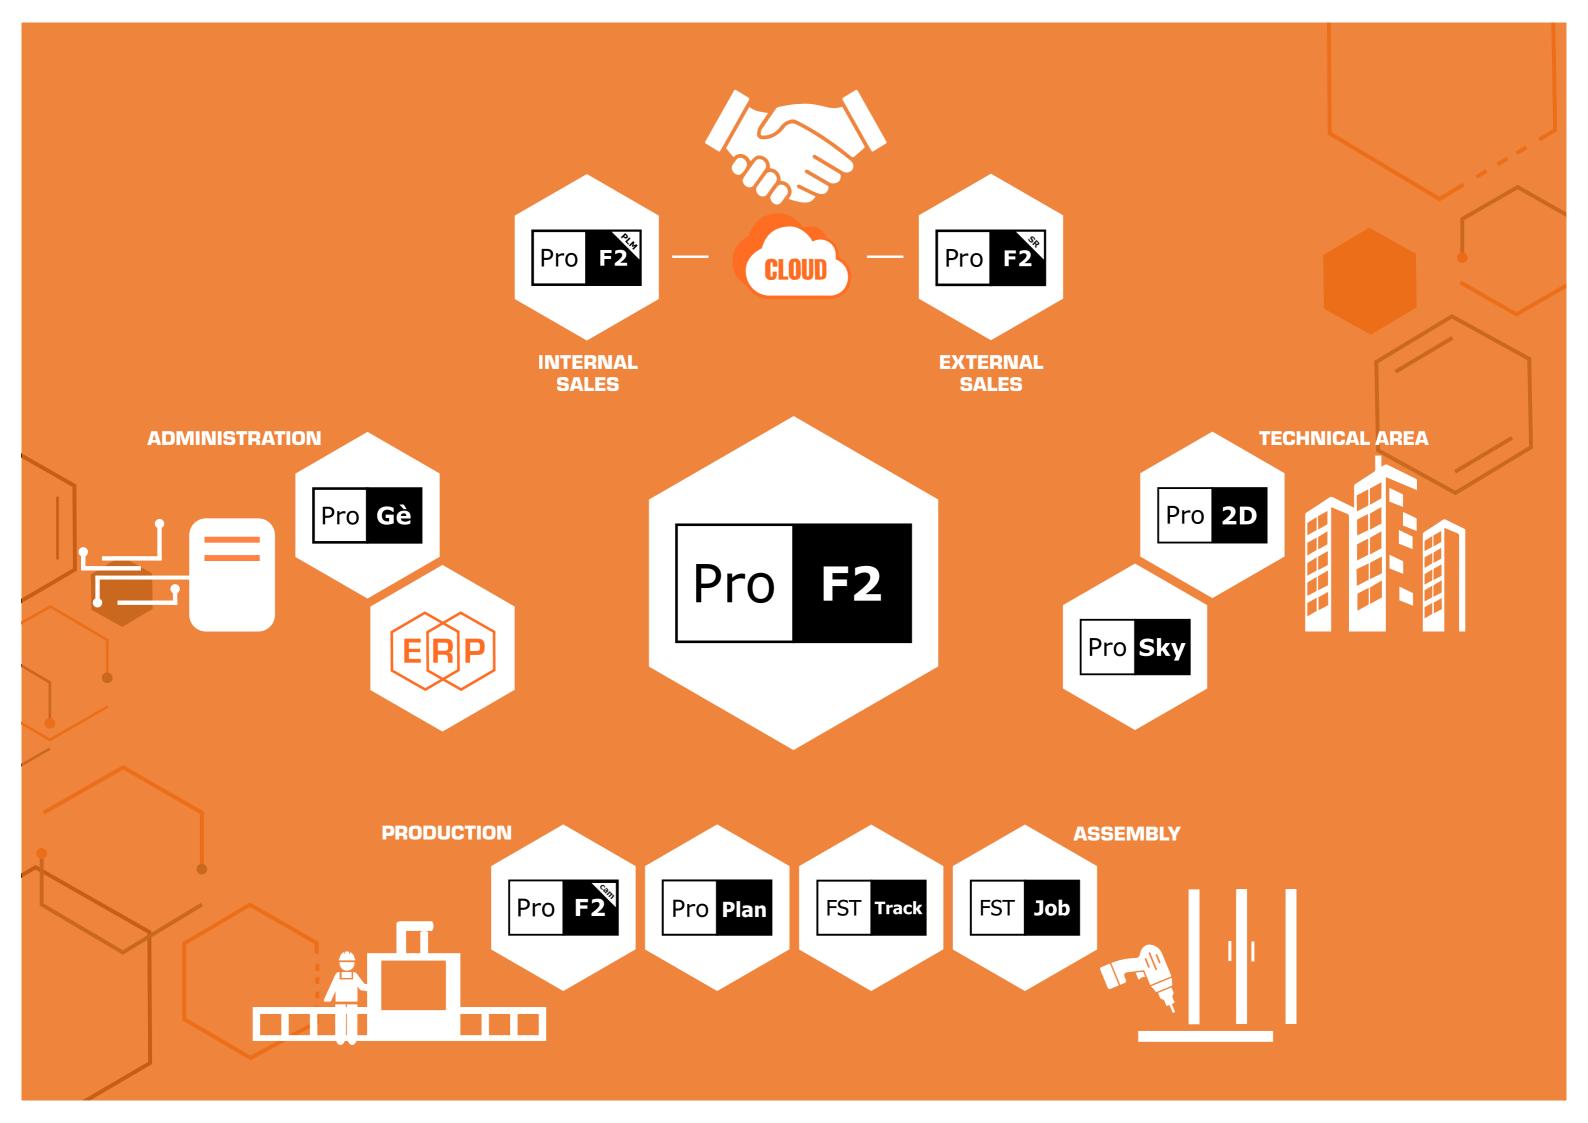

Planning of order production.

Support to the operator during the assembly phases.

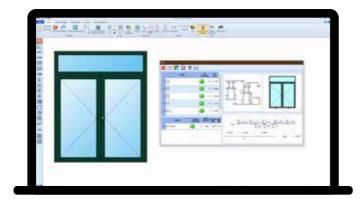

Management of order confirmations, transport documents, invoices and assets and liabilities schedule.

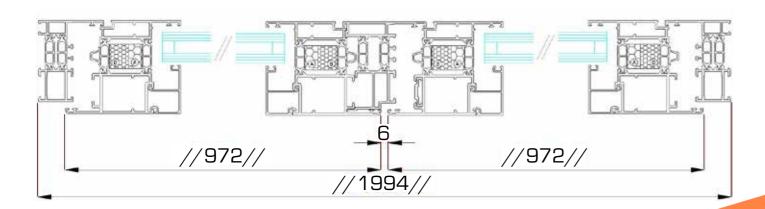

Available in four versions, ProF2 is the ideal solution for the management of door and window frames manufacturers. The fully scalable versions allow easy product upgrades that follow the growth of your business.

### **Design Environment**

ProF2 can make any type of frame: rectangular, polygonal or arched, made of aluminium, PVC, steel or aluminium-wood systems. The CAD-based design environment allows the operator to design the door and window frames in internal or external view, generate sections and nodes or images of frames that can be exported to DXF or DWG. The 3D view shows the operator all the details of the frame, including machining. ProF2 displays the Uw value, the profile and glazing cutting list, and the list of accessories directly in the design environment; these can then be inserted in parameter or optional mode, depending on the size and weight of the frame.

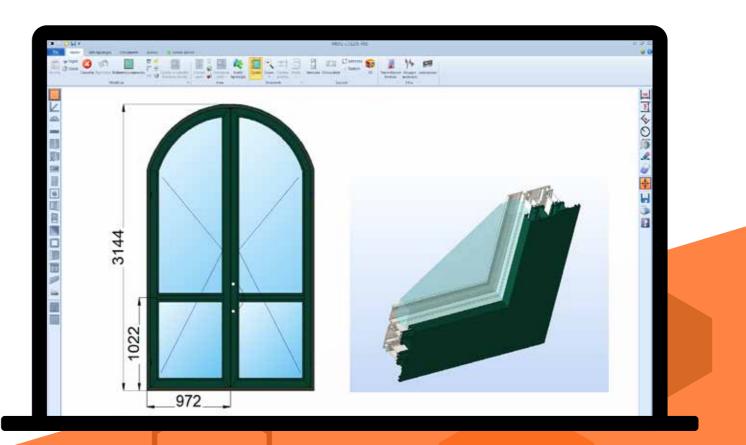

### Uw Calculation and CE Marking

A modern business must also comply with current regulations, which is why ProF2 features an area dedicated to:

- Uw Calculation and verification of the limits according to the climate zone
- Management of Initial Type Tests (ITT) including verification of extensibility
- Printing of the EC declaration of performance
- Management and printing of the FPC production control plan
- Printing of declarations of conformity for tax bonuses

### **Order Management**

ProF2 easily and accurately analyses the production costs of a frame or of an order for door and window frames, calculating the material and the time it takes to complete it. ProF2 can also calculate the analytical selling price of each frame based on the cost of production. Several options allow the operator to customise the layout of the technical labels for production and quotations, which can be viewed, printed or exported to Word®, Excel® and PDF.

### **Grid Price Lists**

ProF2 calculates grid price lists by setting the dimension and steps for each type of frame. The price lists can be printed or exported to Excel®.

### **Profile Archive**

An FST archive, with more than a thousand readyto-use series of profiles, makes starting up ProF2 in your company fast. The archives are open and new systems can easily be added independently. On request, FST can develop new ones.

### Warehouse Management and Orders to **Suppliers**

Starting from a production batch, you are just a click away from managing the work and the unloading of the material from your warehouse. ProF2 automatically stores production-generated profile offcuts and reuses them in new orders.

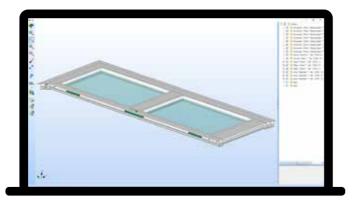

### **Cutting Optimisation**

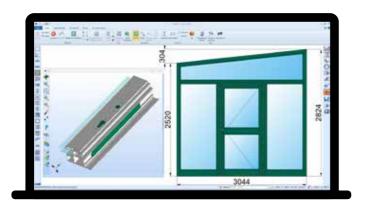

In order to minimize the waste of the bar, ProF2 considers multiple factors, such as: different bar lengths, offcuts, reversibility, aggregation in sets, or optimum bar length search, and always offers the best possible cutting sequence.

### **Machines Integration**

ProF2 transfers all production information to the machines in the workshop, such as trimmers, machining centres, welding machines, polishing machines or automatic assembly benches. The barcode generated by ProF2 identifies the part at all stages of the process.

Features of ProF2 versions:	OPEN	LT	STD	PRO
Guided design of rectangular frames	*	~	•	~

### ProF2 PLV Pro F2

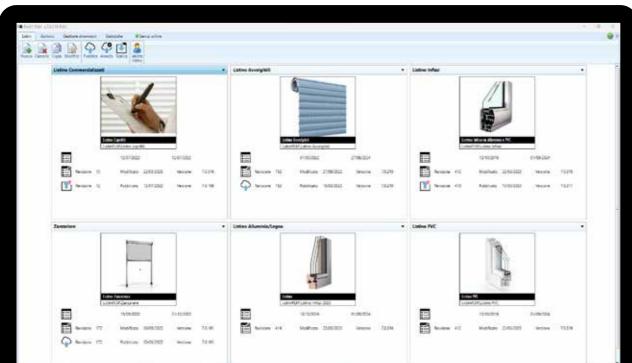

PLM is the solution by FST for managing grid price lists, and is available in two versions. The basic version of PLM, included in ProF2 from the LT version, analytically calculates the price grid and exports it to PDF or EXCEL®.

In the full version, PLM is a powerful commercial configurator capable of analysing the categories and offering the user all the possible technical variants, such as colours, alternative glazing, optional accessories, additional strips and plinths, and possible openings. Each variant identified by the system or entered by the user can be assigned a calculated

price variation according to different rules. With PLM, it is possible to create a price list for any type of frame produced by the company (aluminium, PVC, iron, wood-aluminium, etc.) and also for marketed products such as gates, internal doors, mosquito nets, rolling shutter boxes or frames not produced in-house.

### **Internal Sales Management**

Price lists created with PLM can be used internally by the company to prepare sales quotations using ProF2. The price list categories are automatically converted into technical categories for production and cost analysis to be compared with the analytical price. For maximum flexibility, it is possible to include in the same offer both frames whose price is calculated according to the rules of the commercial price list, and frames created in the technical design environment, whose selling price is calculated in analytical mode.

### Features of ProF2 PLM versions:

881500 400 00 00 00

2200

Calculation of the price grid with analytical method Printing of the price list and export to PDF or Excel® Management of grid price lists, linear or by square n Creation of price lists for marketed items Definition of the item configuration variants Definition of the rules for calculating the sales price Export of price lists to file Automatic upload of price list updates with FST Clou

## ProF2 Showroom Pro F2

The Showroom version of ProF2, designed specifically for managing external sales networks, generates quotations using the price lists generated by the PLM module.

Orders collected by the sales network are transferred to the company to be automatically converted into production orders. The FST Cloud service keeps the price lists for all Showroom programmes up to date and automatically transmits orders to the manufacturer.

### Features of ProF2 Showroom:

Drafting of offers and orders in a single application Fewer configuration and pricing errors Updated price lists via Cloud FST Automatic transmission of orders to the manufacturer Synchronisation of order status and delivery date with the manufacturer

### ProSky Pro Sky

Available in two versions, ProSky is a module of the ProF2 dedicated to the management of flat curtain walls.

Through the guided interface, the operator can quickly defines the structure of the curtain wall. Subsequently, with a few clicks, doors, openings and fixed parts can be inserted. The design in the CAD environment allows a realistic view of the curtain walls and the export of the drawings in DXF or DWG format.

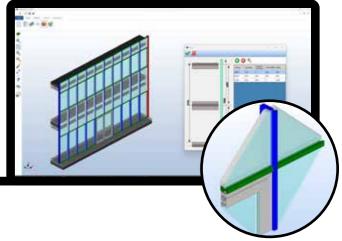

### Features of ProSky versions:

Design in CAD 3D environment Management of rectangular structures Graphic management of the position of floors Graphic management of the position of crosspieces Guided composition of the mullion/transom node Accessory management, including brackets for atta Calculation of the quotation Calculation of materials (profiles, accessories, glazin

Pro2D optimises panel and glazing cutting and can be used individually or integrated with ProF2.

The program calculates the cutting to be carried out according to the size of the available panes. Any reusable excess material is automatically stored for later use. The printed documentation shows the operator the cutting sequence for each panel.

### Features of Pro2D:

Flat optimisation of rectangular shapes

Guillotine or nested optimisation criterion

Materials management with or without venation

Panels warehouse

Automatic loading/unloading of panels from the warehouse

Print layout optimisation

Automatic import of orders from ProF2

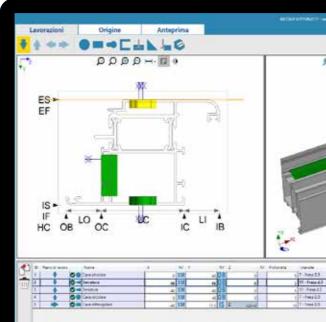

# ProF2 CAN Pro F2

ProF2 CAM, specifically designed for the door and window frame sector, manages a single machining archive common to all machines from the office.

Unlike conventional CAMs, ProF2 CAM allows the user to restrict the position or depth of machining to all known points of ProF2 such as slots or profile chambers, making it easy to assign the same machining to multiple profiles even if their shapes are different. Essential for companies that use multiple machining centres, the machining

### Features of ProF2 CAM:

Machining shared by multiple profiles
Use of ProF2 profile specifications for anchor points
3D machining design
3D machining simulation
Multi-machine machining archive
Compatible with the leading machining centres

The user may decide to record the working time of each step or to report only those steps that have been completed. The operator view shows which phases each operator has worked on and for how long. At the end of the job order, FST Track shows the production times divided by product type.

each order from the office.

### **Features of FST Track:**

leekly/daily view of the operator's activities
ustom definition of production stages
lonitoring of progress by item or global activity
ummary of machining times or progress
utomatic import of production progress data from prepared machines
/eb-based data entry interface that can be used from smart-phones, tablets or PCs

### ProPlan Pro Plan

ProPlan plans production on a weekly basis, assessing the workload for each production line.

The tabs representing the work orders are be planned, analysed and grouped on a daily basis customisable by the user and can be moved according to their characteristics such as: profile between weeks using the drag&drop function. series, colour, place of delivery, means of delivery, Whenever new orders are changed or added, etc. When integrated with FST Track, ProPlan ProPlan graphically displays the weekly workload shows the production progress of each order, allocated to the production lines. thus becoming an integrated tool for production Using the weekly schedule, production orders can management and control.

# Labelling Systems

production

### **Shipping Label Kit**

The kit produces an A6 format label containing information for the delivery and installation of door and window frames. The kit includes a labeller and software.

### **Piece Label Kit**

The kit produces a label for each piece on a roll, sorting them by "profile code" and following the order of the optimised cutting list. The kit includes a labeller and software.

### **CE** and identification label kit

The kit produces a weather-proof plastic label with the CE marking data and the identification code of the frame. The kit includes a labeller and software.

### Portal www.serramentice.it

Access the portal www.serramentice.it and enter the identification code of the frame to download the relevant CE documentation. By scanning the QR code with a smart-phone or tablet you can go directly to the aforementioned documentation.

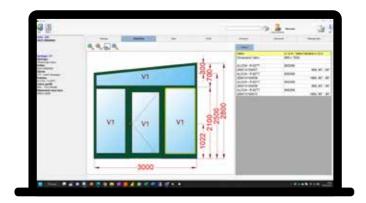

# FST JOD FST JOD

FST Job assists the operator in assembling the frame and replaces the paper documentation provided to workshop technicians.

The program recognizes the frame being assembled by reading the bar-code and displays the data of the sash, glazing and accessories. Any update or modification to the frame design is immediately available in the workshop.

### Features of FST Job:

Typology identification starting from the barcode of any element Zoom and CAD drawing to display also large frames Displaying of the vertical and horizontal section of th Displaying of the accessories envisaged for the typo Displaying of glass measurements and their position Graphical interface that can also be used on touchs Display of the list of pieces for assembling the frame Recording of FPC controls for assembly Printing of label for CE marking Printing of shipping label

ProGè imports data directly from a ProF2 quotation as well as data manually entered and generates the transport document and sales invoice.

Monthly cash outflows can also be monitored using the purchase invoice entry module. Instant and clear reports are a valuable tool for monitoring a company's economic performance.
