# FST Track

Perfectly integrated with ProF2, FST Track allows to check the progress of each work phase for each order from the office.

The user may decide to record the working time of each step or to report only those steps that have been completed. The operator view shows which phases each operator has worked on and for how long. At the end of the job order, FST Track shows the production times divided by product type.

Features of FST Track:

Graphic representation of orders and their status

Weekly/daily view of the operator's activities

Custom definition of production stages

Monitoring of progress by item or global activity

Summary of machining times or progress

Automatic import of production progress data from prepared machines

Web-based data entry interface that can be used from smart-phones, tablets or PCs
