sales

ProF2 Showroom

The Showroom version of ProF2, designed specifically for managing external sales networks, generates quotations using the price lists generated by the PLM module.

Orders collected by the sales network are transferred to the company to be automatically converted into production orders. The Fst Cloud service keeps the price lists for all Showroom programmes up to date and automatically transmits orders to the manufacturer.

Features of ProF2 Showroom:

- Drafting of offers and orders in a single application
- Fewer configuration and pricing errors
- Updated price lists via Cloud Fst
- Automatic transmission of orders to the manufacturer
- Synchronisation of order status and delivery date with the manufacturer
